## INTRODUCTION

Intellectual property (IP) refers to a number of distinct types of creations of the mind for which a set of exclusive rights are recognized. A patent is a set of exclusive rights granted by a government to an inventor or applicant. It is a legal document defining ownership of a particular area of new technology. Common types of intellectual property rights include copyrights, trademarks, patents, industrial design rights and trade secrets. Most of the R&D organizations have in-house facilities to provide patent support. However most of the academic institutions does not have such facility. Therefore it is planned to organize one day workshop on Intellectual Property (IP) and Patent Lifecycle Management (PLM) to create awareness of IPR among scientists, faculties, research scholars and UG/PG students of engineering and technology.
